

“ACADEMIA 2.0”

A.K.A. STRUCTURED COMMONS

R. POSS, S. ALTMAYER, M. THOMPSON, R. JELIER
UNIVERSITY OF AMSTERDAM / LUMC / KU LEUVEN

ACM SIGPLAN TRUST 2014,
JUNE 12TH 2014, EDINBURGH, UK

MOTIVATING IMPULSES

Access

“My peer could not access that *published* article”

Bottlenecks

“Today’s centralized repository is tomorrow’s predatory capture”

Durability of citations

“Today’s URL is tomorrow’s 404”

DAWN OF A NEW GENERATION

“I fail to see how it is our job a scientists to keep publishers viable; in hindsight, no one believes we should have subsidised horse trainers and blacksmiths to compete with the rise of the automobile.” –M. Verstraaten

**The Internet is academia's automobile
But **how should we use it?****

“ACADEMIA 2.0”

OVERVIEW

- Methods and protocols
- to organize registration, dissemination, filtering and preservation of academic scientific works
- using Internet-based distributed storage, open peer review, and open and automated filtering
- and an actionable and threshold-free transition path from the current ecosystem

“ACADEMIA 2.0”

UNDERLYING METHODS

Principles:

Affordable

Suitable for modern
digital objects

Open peer review

Reader-directed
filtering

Reviewer recognition

Means:

Secure

timestamping

Content-based
addressing

Semantic web

Post-hoc citations

ACADEMIC PUBLISHING, A MEANS TO AN END

Registration: Timely, Verifiable, Affordable€

Dissemination: Timely, Affordable€

Filtering: Accountable, Transparent, Effective

Preservation: Durable, Independent

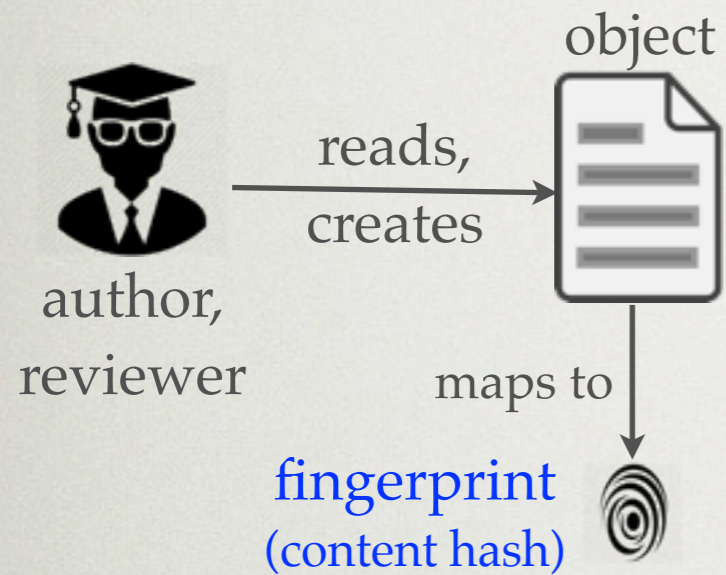

STATE OF THE ART

	Reg.			Diss.		Filt.			Pres.	
	T	V	A€	T	A€	Ac	Tr	E	D	I
Paper-supported conventional publishers	X	✓	(X)	X	(X)	X	X	?	✓	✓
Online-only publishers supported by subscriptions or APCs	X	?	X	✓	X	X	X	?	?	X
Unstructured online self-publishing (eg. blogs)	✓	X	✓	✓	✓	X	✓	X	X	✓
Public online institutional repositories (eg. arXiv)	✓	?	?	✓	✓	N/A			?	X
New-gen OA journals + open peer review (eg. theoj.org)	✓	?	?	✓	?	✓	✓	✓	N/A	
Public online institutional repositories + open peer review	✓	?	?	✓	✓	✓	✓	✓	?	X

EXAMPLE IMPLEMENTATION OF OPEN PEER REVIEW

time

author

PC, editors

reviewers

TSA

DS, QE

creates object

obtains certificate

anonymizes document

requests review

select

accept request

accept invitation

start of review process

request review

check previous works

create reviews

submit reviews

filter / anonymize reviews

includes reviews

create summary

obtain certificate

inform author

(publish summary & reviews, if requested by author)

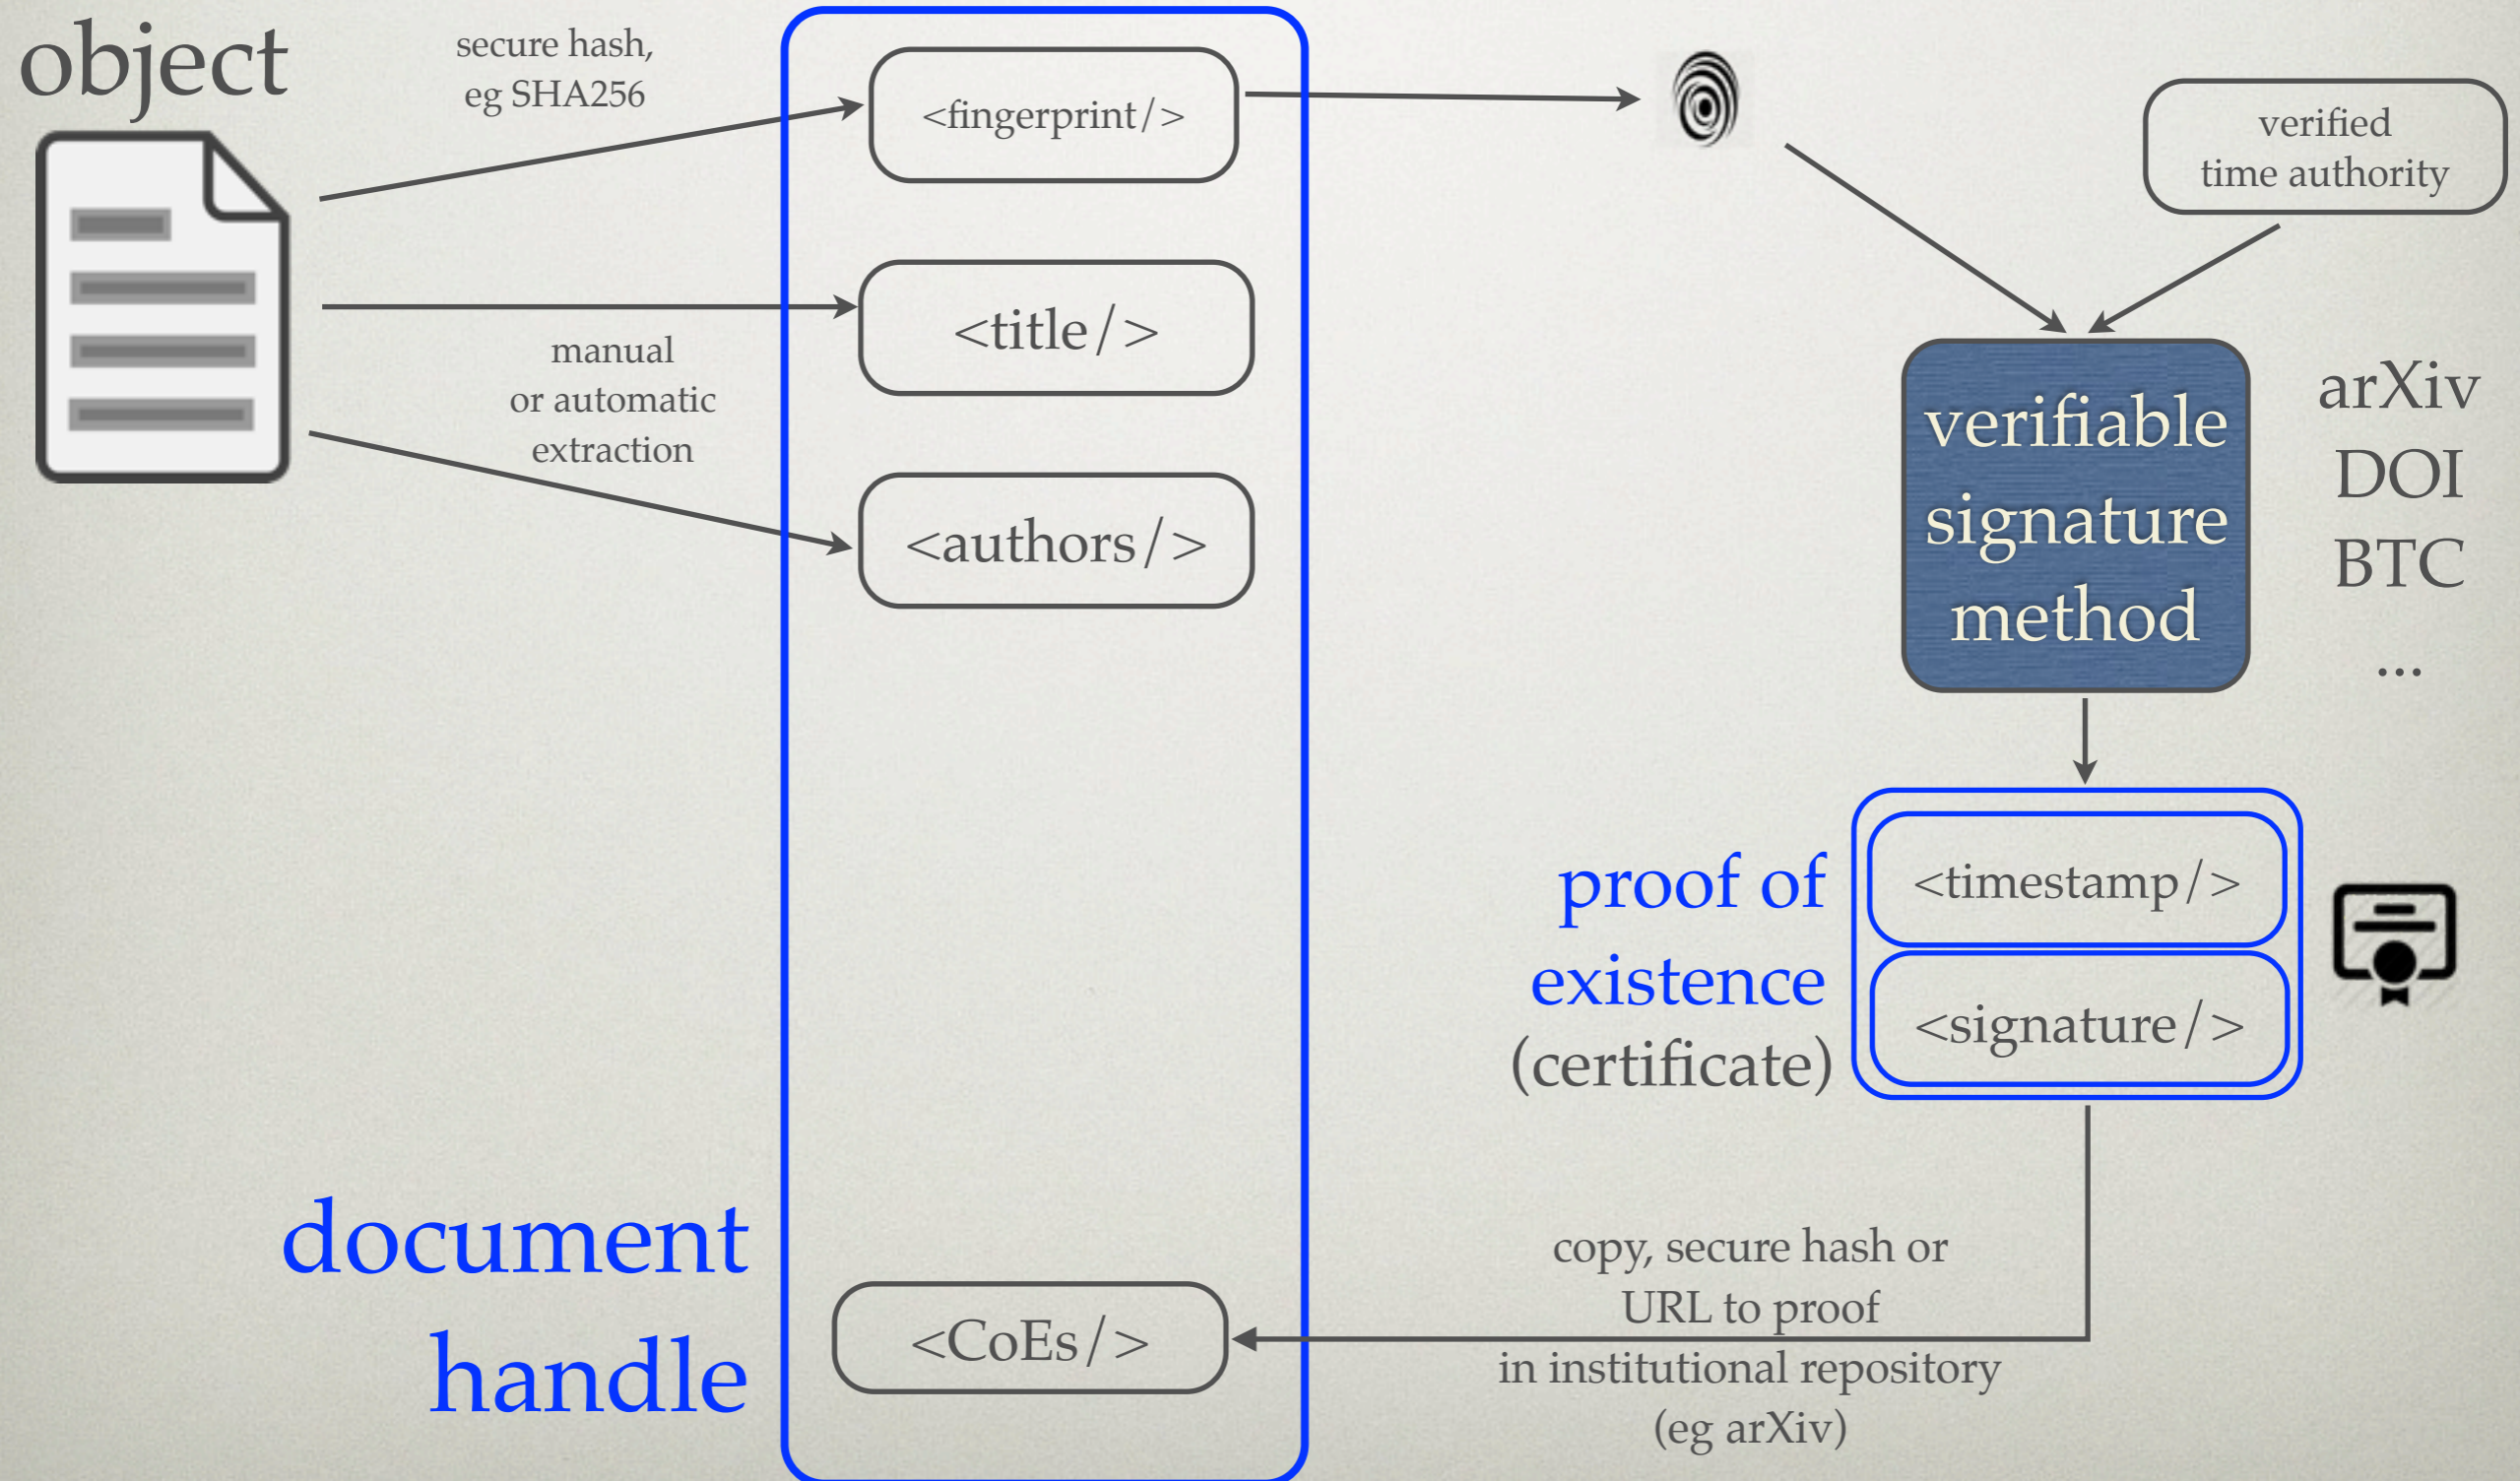

end of review process

publishes full object

MECHANISM: PROOFS OF EXISTENCE

MECHANISMS: DISTRIBUTED STORAGE

- Dual network:
 - Institutional data store network:
Repositories + peering replication contracts
 - Peer-to-peer data store network:
DHT, inspired by / reuses Bittorrent
- Magnet URIs for location and retrieval
- Metadata calculus:
 - Formal framework for edits & merges
 - Manages evolution of metadata extraction algorithms & conflicting updates over time
- Open and extensible metadata extraction algorithms

STRUCTURED COMMONS: TRANSITION PATH

Crawl and index*
private PDF / BibTeX
repositories

Lobby researchers
to run P2P DS
software

STRUCTURED COMMONS: TRANSITION PATH

Crawl and index*
private PDF / BibTeX
repositories

Lobby conference
organizers to release*
review summaries

Lobby researchers
to run P2P DS

Lobby university
libraries to run
DS / QE software

STRUCTURED COMMONS: TRANSITION PATH

Crawl and index*
private PDF / BibTeX
repositories

Lobby conference
organizers to release*
review summaries

Run conferences
and journals “as usual”
just w / different tools

Lobby researchers
to run P2P DS
software

Lobby university
libraries to run
DS / QE software

Demonstrate and
promote SC-based
research metrics
for career development

STRUCTURED COMMONS: GRASSROOTS, BOTTOM-UP

- **No special tools or technology needed** to start using Structured Commons fingerprints, citation formats and review objects
- **Existing platforms/projects can be transparently extended** towards support for “Academia 2.0” & Structured Commons
- **New tools & businesses can be evolved later, as needed**, after scientists start using SC fingerprints and citation formats
- Avoids “Build it, they will come” (NIH)
- Avoids “Give your content to us, so we can serve it using our platforms” (lock-in)
- Avoids “Change your workflows/tools and adopt our own” (inertia)

STRUCTURED COMMONS: COMMUNITY & STEERING

- **Structured Commons** is the name given to the model and infrastructure that supports the vision for “Academia 2.0”
- Structured Commons is a community initiative – anyone can participate and contribute
<http://www.structured-commons.org>
- The **Structured Commons Technical Steering Committee** (SCTSC) is responsible for maintaining the documentation (protocols, methods, guidelines) and example tool implementations, **published in the public domain**

STRUCTURED COMMONS: CURRENT & FUTURE WORK

- Formal research: [metadata calculi](#)
- Architecture **specifications** (SCEPs):
 - [Document handles, metadata formats](#)
 - [Protocols for peer review](#)
- Empirical experiments using prototype:
 - [Simulations of open peer review & QE filtering](#)
 - [Pre-evaluation research metrics using shadow network](#)
- Marketing & PR:
 - [Integration in Open Access initiatives](#)
 - Partnerships with current technology projects

THANK YOU!
